Manitoba Geological Survey 2019 Overview

ABSTRACT

This overview outlines the Manitoba Geological Survey's 2019 program, including the broad range of independent, partnered and collaborative geoscience initiatives undertaken this year. The differing scales and diversity of these projects reflect the Survey's aptitude to tackle complex geological problems posed by Manitoba's diverse geology.

The presentation emphasizes on the Survey's priority to build and maintain a comprehensive and authoritative geoscience infrastructure that is effective and accessible to all stakeholders, and provides avenues for partnerships and the sustainable development of Manitoba's mineral and energy resources.

BIOGRAPHY

Christian Böhm received his diploma degree in structural geology and Ph.D. in geochronology and isotope geology from ETH Zurich in Switzerland. He did post-doctoral research and teaching at the University of Alberta in Edmonton, prior to joining the Manitoba Geological Survey in 2002. Christian became Head of the Precambrian Mapping section of the survey in 2009, Acting Director in 2012, and Chief Geologist in 2017.
